

Swoop Business Analytics

Executive Review: Revenue, Customers and Delivery Operations

Raymond Olutola

Data Analyst

PostgreSQL • Power BI • SF / LA / NY

Executive Summary

Bulk meal stocking is the profit engine: roughly 58% of revenue at only about 4% of delivery cost

58%

of revenue from bulk orders

Retention collapsed from 19.24% in Q1 to 4.00% in Q4 while new-user growth masked the decline

4.0%

Q4 retention rate (from 19.24%)

Revenue concentrates in Dinner (~\$1.4M); Beverages and Snacks stay below 15% of the total

Shift to a planned, bulk-first model with RFM-driven retention for the top customer cohort

Business Context

Founded in 2020, Swoop lets customers order from multiple restaurants in a single transaction

An electric scooter fleet and a bulk meal stocking pre-order feature anchor the operating model

1,000+ restaurant partners across San Francisco, Los Angeles and New York serve urban professionals

Leadership faces fragmented revenue data, unclear per-order economics and no real-time reporting

Project Scope

10-table PostgreSQL schema:
users, orders, meals, deliveries,
couriers, promotions and more

Duration: 2 weeks
Output: SQL library + Power BI
dashboard

Business Analytics Dashboard

\$76.5K

1,485

active users (Dec)

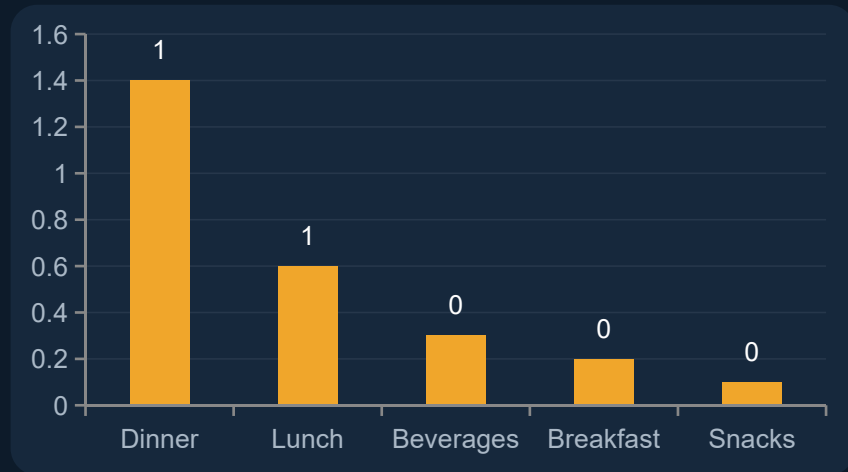

27.6 min

avg delivery time

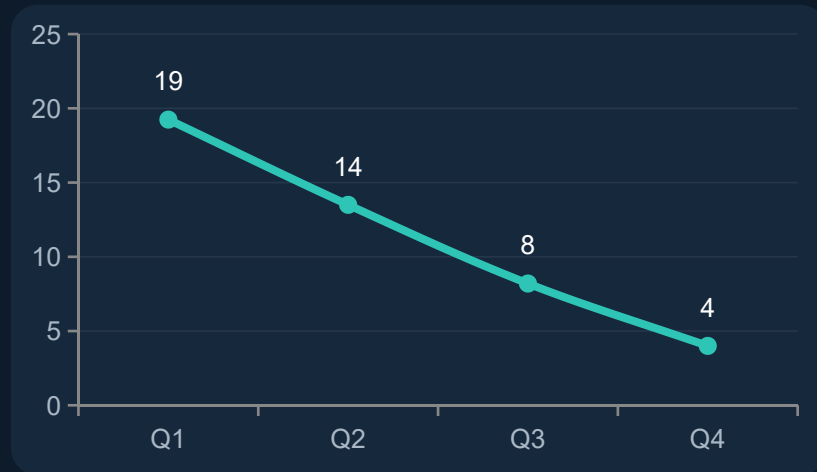

250

top 10% customers

Revenue by Meal Category (\$M)

Retention Rate by Quarter (%)

Revenue Insights

Dinner dominates with roughly \$1.4M in revenue, the single largest meal segment

Lunch and Dinner together deliver about \$2.0M versus \$0.4M from Beverages and Snacks

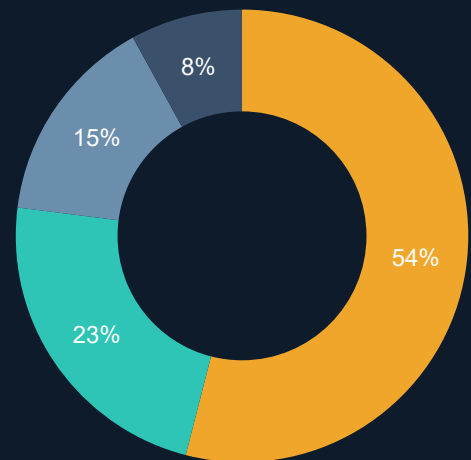

Beverages and Snacks contribute under 15% of revenue despite high margins

Q4 revenue trended sharply upward, driven by new active users rather than loyalty

Share of Total Revenue

■ Dinner ■ Lunch ■ Bev + Snacks ■ Breakfast

Customer & Retention Insights

Retention fell nearly 80% across the year: 19.24% in Q1 down to 4.00% in Q4

Active users grew from 1,198 in October to 1,485 in December, masking the churn

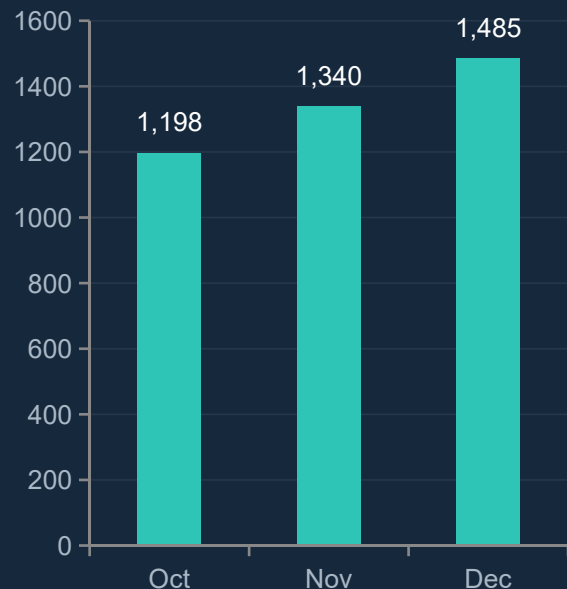

The top user generated \$10.0K and each of the top 10 customers exceeds \$7.1K

Acquisition, not loyalty, fuels growth: a classic leaky bucket pattern

Active Users by Month

Order Economics: Bulk vs Standard

Bulk orders produce about 58% of revenue yet only around 4% of total delivery cost

Standard orders absorb roughly \$73K in delivery cost, close to 95% of the total

Bulk out-earns standard by about \$400K while costing roughly \$70K less to deliver

Planned, aggregated orders let the scooter fleet complete higher-value trips with fewer runs

BULK ORDERS

~58% of revenue

~\$3K delivery cost (~4%)

STANDARD ORDERS

~42% of revenue

~\$73K delivery cost (~95%)

Fleet & Delivery Insights

Electric scooters handle 18.1K deliveries, far ahead of bicycles (3.6K) and cars (3.3K)

The fleet maintains a solid 27.6-minute average delivery time across all vehicle types

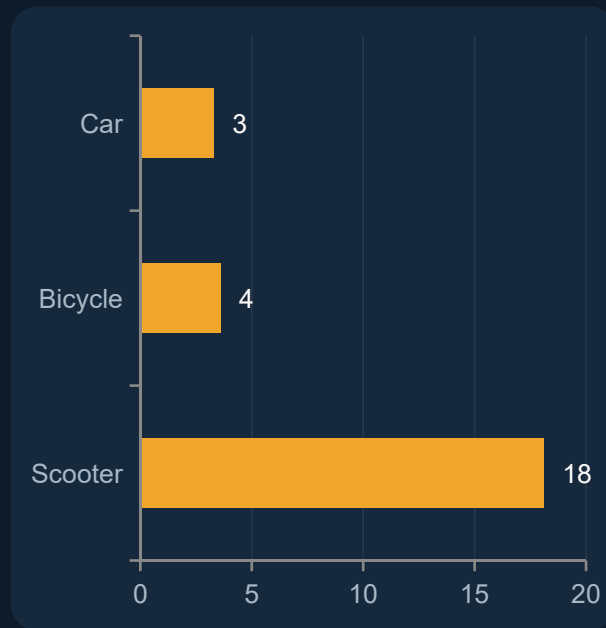

Car deliveries likely drive the rising cost pressure inside the \$76,530 delivery total

Evening demand concentration leaves daytime courier capacity under-utilised

Deliveries by Vehicle Type (K)

Key Business Risks

Standard delivery costs scale linearly with user growth, eroding margins as Swoop expands

Marketing spend becomes unsustainable once the new-user pool in NY, LA and SF is exhausted

Losing even one top-cohort customer removes a disproportionate share of revenue

Competitors offering instant delivery could pull away customers who resist the bulk model

~95%

of delivery cost sits in standard orders

25-30%

of revenue rides on the top 250 users

Strategic Recommendations

Make bulk stocking the default, incentivised option for Lunch and Dinner in the app

Deploy SQL-based RFM segments and automated win-back campaigns for drifting customers

Launch a Swoop VIP tier for the top 250 users with priority stocking windows and support

Phase out car deliveries in dense urban cores and reallocate orders to the scooter fleet

Add a Complete Your Meal upsell for high-margin beverages and snacks at checkout

Implementation Roadmap

1

Week 1

Deploy RFM segments to flag drifting high-value users
(Data Analytics)

2

2 Weeks

Stand up the Swoop VIP tier for the top 250 customers
(Customer Success)

3

Month 1

Pilot bulk-only delivery incentives in San Francisco
(Operations)

4

Q3 2026

Roll out bulk-first UX and phase out urban car deliveries
(Product & Fleet)

Expected Business Impact

Retention rebuilds from 4% toward the 15-20% range seen at the start of the year

Average order value rises 10-15% through beverage and snack upsells at zero extra trip cost

Total delivery cost falls up to 30% by consolidating standard orders and retiring urban cars

Executives gain real-time Power BI visibility, replacing manual CSV exports

+200%

targeted retention recovery

-30%

delivery cost reduction goal
